

Regular fire system testing protects people, property, and can impact your profitability – **IT'S ALSO REQUIRED.**

Your fire alarm system will only operate properly if it is well maintained and tested on a regular basis. To meet the standards of the National Fire Alarm Code, your local building department and fire inspector, annual testing is required. Your insurance carrier can reject any commercial claims if you do not have proof of complete annual inspections.

Limit your potential liability for any injuries suffered by tenants, employees, or guests at your location. Regular fire equipment testing can also save you costly fines incurred by triggering false alarms.

Safe Systems Meets ALL Requirements from the National Fire Prevention Association.

We test & visually inspect:

- Panel functionality, LED's, and fuses
- Panel battery charger
- Battery discharge
- Horns, strobes, chimes, and bells
- Smoke detectors
- Heat detectors
- Duct smoke detectors
- Voice evacuation equipment

We can also inspect fire hoses, extinguishers, sprinkler systems, hydrants, pumps, and backflows.

The National Fire Alarm Code requires all commercial systems to be inspected and tested annually.

Safe Systems is a licensed alarm contractor who has been doing business in Colorado for over 30 Years.

We offer easy-to-understand, quality reports regarding our testing results. Obtain a no-obligation evaluation of your commercial fire alarm system and quote for inspection today.
